

12-core figure-eight self-supporting optical cable

Article Overview

A 12-core figure-eight self-supporting optical cable is an outdoor aerial fiber optic cable with a steel-wire strength member, loose tube fiber arrangement, and water-blocking system, designed for robust, self-supporting installation.

Structure and Design

The cable features a figure-eight profile, integrating the fiber core and a stranded steel wire strength member into a single self-supporting unit, eliminating the need for additional support wires during aerial installation (). The fiber cores—either single-mode or multi-mode—are housed in loose tubes made of high-modulus plastic, which are twisted around a metallic central strength member to form a compact, circular core (). Water-blocking materials are distributed in the interstices to prevent moisture ingress.

Mechanical and Environmental Performance

- **Tensile Strength:** The stranded steel wires provide excellent strain performance and can withstand significant pulling forces during installation ().
- **Crush and Impact Resistance:** Corrugated steel tape armor and a polyethylene (PE) outer sheath protect against mechanical damage, including crush and gunshot resistance ().
- **Temperature Range:** Designed to operate reliably in a wide temperature spectrum, typically from -20°C to 60°C ()....
