

304 mesh cable trays are available in a full range of specifications

Article Overview

304 stainless steel mesh cable trays are available in a wide range of specifications, offering durability, corrosion resistance, and versatile installation options for industrial and commercial applications.

Material and Construction

304 stainless steel cable trays are constructed from high-quality stainless steel, providing exceptional corrosion resistance, structural strength, and long-term durability . The stainless steel composition includes chromium and nickel alloys, forming a passive oxide layer that protects against moisture, chemicals, and temperature fluctuations . Wire diameters typically range around 5.0mm, and the mesh design allows for efficient ventilation and heat dissipation, preventing cable overheating .

Dimensions and Specifications

These trays are available in various lengths, widths, and heights, with common options including 2-inch wide by 2-inch high mesh sections and lengths up to 10 feet or more . The open-mesh design allows installers to route cables in and out at any point without cutting the tray, and flanged sides prevent cables from falling off . Custom sizes and configurations can often be requested to meet specific project requirements
