

Adding cable tray dimensions in Revit

Article Overview

In Revit, you can set cable tray dimensions by editing type properties for width, height, offset, and bend radius, and by loading or modifying fittings for custom configurations.

Setting Up Cable Tray Dimensions

- Select the Cable Tray Tool In Revit MEP, go to the Systems tab and select Cable Tray. You can choose between Cable Tray with Fittings or Cable Tray without Fittings depending on your project needs .
- Edit Type Properties Click Edit Type to access parameters such as:
 - Width and Height: Define the cross-sectional size of the tray.
 - Offset: Sets the vertical distance from a reference level.
 - Bend Radius: Determines the curvature for turns and elbows.
 - Bend Radius Multiplier: Adjusts the bend radius for specific fittings . These parameters allow you to control the overall dimensions of straight runs and ensure compatibility with other systems.
- Load and Configure Fittings If your project requires bends, tees, or vertical transitions, load the appropriate Cable Tray Fittings from the Revit library. Once loaded, assign them in the Edit Type dialog to match your routing preferences, including radius and type of bend .

Adding Custom Sizes

Revit comes with predefined cable tray sizes, but you can add or modify sizes:...
