

Aesthetically pleasing low-voltage cable trays

Article Overview

Mesh, aluminum, and wire basket cable trays offer both functional support and visually appealing designs for low-voltage cabling.

Mesh and Wire Basket Trays

Mesh cable trays are constructed from steel wire welded into a grid structure, providing a lightweight, ventilated, and open design that allows cables to remain visible and organized, enhancing aesthetics while facilitating maintenance and upgrades . Wire basket trays feature an open-face grid pattern that supports airflow, reduces cable sag, and can be customized in color and size to blend seamlessly with interior design . These trays are ideal for network, signal, and fiber optic cables, ensuring proper heat dissipation and minimal interference.

Aluminum Cable Ladders

Aluminum alloy cable trays or ladder racks are known for their uniform, oxidized surface texture, giving a sleek and elegant appearance . They provide high load-bearing capacity (up to 300 kg per meter) and allow direct cable fixation, making them suitable for data centers and high-performance low-voltage installations. Aluminum trays can be installed in single or double layers and offer flexible mounting options, including ceiling, wall, or under-floor installations.
