

Andorra Non-standard Explosion-proof Distribution Box Specifications

Article Overview

Non-standard explosion-proof distribution boxes are customized enclosures designed for hazardous environments, offering high-strength materials, sealed construction, and internal isolation to safely distribute and control electrical power.

Overview

Non-standard explosion-proof distribution boxes are primarily used in environments with flammable gases, vapors, or dust, ensuring safe operation of electrical systems by controlling, protecting, and monitoring circuits . These boxes are customizable to meet specific client requirements, including size, internal layout, and component configuration .

Structural Design

- **Shell Material:** Typically made from high-strength metals such as aluminum alloy or stainless steel, though some models use engineering plastics. The materials provide sufficient strength to withstand internal explosions and external impacts .
- **Sealing Structure:** The lid and box are sealed with special sealing strips to prevent ingress of flammable gases or dust and to contain internal sparks or flames .
- **Internal Layout:** Components are isolated into separate units to prevent sparks or arcs from propagating between switches, meters, or other electrical elements .
