

Applications of fireproof vertical shaft cable trays

Overview

When cable trays pass through walls or floors, seal openings using fire-rated penetration sealing materials. Do not modify or damage the tray coating or structure during use. 7 products are successfully used to protect cables in high-rise buildings, industrial buildings, and offshore facilities as well as in sensitive areas, such as hospitals, airports, production. Cable tray installation must comply with specific technical standards to ensure electrical safety, system reliability, and long-term maintainability. A rung spacing of 6 to 9 inches (150 to 230 mm) is preferable when the cable tray is used for instrumentation and control applications that require. The design achieves efficient heat dissipation and lightweight, reducing the weight by 30%, which can significantly improve construction and maintenance efficiency. High Protection Rating: Completely isolates dust, moisture, oil contamination, and external mechanical damage, providing the most. The Fireproof Vertical Shaft Support for Cable Tray in High-Rise and Industrial Buildings provides reliable vertical support for cable trays in demanding commercial, industrial, and high-rise applications.
