

Bending tool for distribution boxes

Article Overview

A distribution box bending tool is used to shape and form metal panels for electrical enclosures, available in manual, hydraulic, and automated configurations.

Overview

A distribution box bending tool is designed to bend and shape sheet metal panels used in electrical distribution boxes, control panels, and cabinet enclosures. These tools are essential in both small-scale workshops and large-scale production lines for creating precise bends, flanges, and complex structures in metal boxes .

Types of Bending Tools

- Manual Bending Tools
 - Simple, cost-effective, and suitable for small-scale or on-site work.
 - Operated by hand, often with adjustable angles from 0° to 180° for cable or panel bending .
 - Ideal for electricians or technicians needing portability and flexibility.
- Hydraulic Bending Machines
 - Use hydraulic power to bend thicker metal sheets with higher precision.
 - Can include molds for different box sizes (150/200/250/300/350 mm) and adjustable workpiece lengths .
 - Often feature manual and automatic modes, allowing standalone operation or integration into production lines.
- Automated Bending Centers...
