

Broadband fiber optic cable short

Article Overview

The U.S. is currently facing a significant shortage of broadband fiber optic cables, with lead times extending over a year for some types, impacting broadband expansion and critical infrastructure.

Scope and Causes of the Shortage

The fiber optic shortage is driven by a combination of high demand and limited supply. Federal programs like the Broadband Equity, Access, and Deployment (BEAD) initiative aim to deploy nearly 500,000 miles of fiber, while data centers and private networks require tens of thousands of additional route miles . This surge in demand coincides with a limited number of U.S. manufacturers producing Build America, Buy America (BABA)-compliant fiber, including Corning, OFS, and Prysmian . Raw material constraints, particularly for specialized glass, further exacerbate the shortage .

Lead Times and Types of Fiber

- Ribbon fiber, commonly used in data centers, has lead times of 60+ weeks due to its complexity and high demand .
- Loose tube fiber, used for outdoor and fiber-to-the-home (FTTH) deployments, is expected to be available around Q3 2026 .

These extended lead times affect both urban and rural broadband projects, slowing down deployment schedules and increasing costs .

Implications for Broadband and National Security...
