

Can outdoor server racks be installed in basements

Overview

Can the racks be installed in basement or internal spaces?

Absolutely. Our two-tier racks are suitable for both indoor and outdoor installations, including underground car parks and plant rooms. What's the best practice for mounting the server rack onto the concrete wall?

My standard goto: mount. Deploying a server cabinet indoors is straightforward, but moving it outdoors introduces many environmental challenges: temperature fluctuations, direct sunlight, rain, dust, lightning, and unstable power. This unfinished crawlspace area is primarily used as storage and doesn't see a ton of foot traffic, but I started to get a bit concerned in thinking about the dust I would kick up that would be ingested by my equipment in the rack. Is this much of a concern and should I look into a NEMA rack or. I finally want to set up my own rack, I am looking at a second hand 42U (simply because I have the space for it and generally those sizes can found cheap here) or at least something close to that size and I plan to place it in my basement. Remember, a carefully chosen location can greatly improve your network setup's efficiency and longevity.
