

Commonly Used Cable Tray Production Equipment

Article Overview

Cable tray production equipment includes shearing machines, bending machines, CNC punching machines, roll forming machines, and automated production lines for efficient manufacturing.

Raw Material Handling Equipment

The first step in cable tray production involves preparing and handling raw materials. Shearing machines are used to cut metal sheets or coils to precise dimensions, ensuring accuracy for subsequent processing. Bending machines shape the metal sheets at predetermined angles, forming the basic structure of the cable tray and maintaining consistent angles for structural stability .

CNC Punching Machines

CNC punching machines are employed to create holes, slots, or specific patterns in metal sheets according to programmed designs. These machines enhance precision and allow for complex perforation patterns, which are essential for ladder-type or ventilated cable trays .

Roll Forming Machines

Cable tray roll forming machines are high-performance production lines that continuously shape metal coils into cable tray sections. These machines can produc...
