

Dangers of the distribution box

Overview

A septic distribution box (D-box) is a concrete or plastic junction that evenly distributes wastewater from your septic tank to all drainfield lateral lines. When it fails, symptoms include uneven wet spots in the yard, slow indoor drains, and sewage odors. However, in actual applications, distribution boxes often encounter a series of problems, which not. Outdoor low-voltage power distribution boxes (hereinafter referred to as "distribution boxes") are low-voltage distribution equipment used in 380/220V power supply systems to receive and distribute electrical energy. Distribution boxes act as important junctions, ensuring uniform. There is no fault protection mechanism for the leakage protector and circuit breaker installed in the distribution box. When the leakage protector, circuit breaker itself is damaged, abnormal and malfunction, they still look normal, but they do not play a protective role in the event of leakage. A waterproof distribution box must maintain an airtight seal to protect electrical components from moisture.
