

European Fiber Optic Trench Company

Overview

We carry out mini-trench and traditional excavations for laying fibre optics and copper, manholes and equipment. We have our own vehicles and equipment, as well as personnel qualified in confined space work, work at height, road signs and georadar surveys to identify existing. For over 25 years, Eurofiber Group has been building a neutral, interoperable network across Europe. Today, Eurofiber deploys 77,500 km of optical fiber in the Netherlands, Belgium, France, Germany, and Luxembourg. We own eleven data centers and connect to more than 300. In contrast to “classic” civil engineering, in which an open trench is dug and the pipes are laid at least one meter deep, alternative laying techniques require less depth – and ideally almost no large. Since 2007 Tecol Group Srl has been active in the laying of telecommunication infrastructures. It provides companies, government bodies and non-profit organizations a future-proof infrastructure. We meticulously carry out all aspects of civil work from noticing/permitting and logistics to managing experienced civils gangs: Specialists in Fibre Optic Cabling with years of experience in small and.
