

Fiber Distribution Box 144 Cores

Article Overview

A 144-core fiber distribution box is a high-capacity enclosure designed for splicing, termination, and distribution of fiber optic cables, suitable for both indoor and outdoor network deployments.

Overview

A 144-core fiber distribution box (FDB) is engineered to manage large-scale fiber optic networks efficiently. It serves as a termination point for feeder cables to connect with drop cables, allowing splicing, splitting, and distribution of fibers while providing robust protection and organization for the network infrastructure . These boxes are widely used in FTTH, FTTx, PON, and enterprise networks.

Types and Construction

- Indoor Fiber Distribution Boxes
 - Typically wall-mounted and compact.
 - Made from durable plastics or ABS material for lightweight strength.
 - Designed for splicing and termination between SC, LC, or FC fiber cables and pigtails .
 - Often feature a double-layer design: upper layer for splicing and cross-connection, lower layer for splitter and excess fiber storage .
- Outdoor Fiber Distribution Boxes / Dome Closures
 - Constructed from metal (cold-rolled steel or stainless steel) or high-strength engineering plastics.
 - IP68-rated for waterproof and dustproof protection, suitable for aerial, pole-mount...
