

Fiber optic cable grounding upon entering the equipment room

Overview

In installations where an optical fiber cable is exposed to contact with electric light or power conductors and the cable enters the building, the non-current-carrying metallic members shall be either grounded as specified in 770. 100, or interrupted by an insulating joint or. This Applications Engineering Note (AE Note) discusses conventional bonding and grounding practices for conductive fiber optic cable and hardware installations within the scope of the National Electrical Code (NEC). The critical distinction lies in. The Professional Association Of Fiber Optics [www. org](http://www.org) The Fiber Optic Association, Inc. (FOA) was founded in 1995 to help develop the workforce to build the fiber optic networks to support a rapid expansion in communications and the Internet. Any cable that includes any conductive metal must be properly grounded and bonded in conformance with the. While nonarmored fiber optic cables don't require grounding due to their nonconductive properties, grounding is crucial when using armored fiber optic cables. When designing with fiber, you can.
