

Fiber optic connection to router WAN

Article Overview

To connect a fiber optic WAN to your router, you typically need an Optical Network Terminal (ONT) or a compatible SFP/SFP+ module, which converts the optical signal into an electrical signal your router can use.

Required Equipment

- Optical Network Terminal (ONT): Most fiber connections, especially GPON, require an ONT provided by your ISP. It converts the incoming optical signal into Ethernet for your router .
- Fiber-Ready Router or SFP/SFP+ Port: Ensure your router supports fiber input either via a dedicated SFP/SFP+ port or through a WAN Ethernet port connected to the ONT .
- Fiber Optic Cable: Typically a thin yellow cable with SC/APC or SC/UPC connectors .
- Ethernet Cable: To connect the ONT to your router's WAN port, usually Cat6a or higher for optimal speeds .

Step-by-Step Setup

- Install the ONT:
 - Locate the fiber wall outlet.
 - Connect the fiber optic cable from the wall to the ONT.
 - Power on the ONT and wait for the status lights to stabilize (2-5 minutes), .
- Connect ONT to Router:
 - Use an Ethernet cable to connect the ONT's LAN port to your router's WAN port.
 - Power on the router and verify connectivity via indicator lights
