

Fiber optic routers do not require a power source

Overview

Because fiber lines don't carry electricity, your ONT (Optical Network Terminal), router, and WiFi equipment need to be powered. When the electricity goes out, your home devices shut off, taking your connectivity with them, even if the fiber network is still operating. Fiber internet, known for its incredible speed and reliability, often sparks questions about its operational requirements. A common one is: does fiber internet require electricity?

The straightforward answer is yes, but the nuances are important. Understanding this dependency is key to appreciating its. While the fiber optic cables themselves transmit data using light signals and do not inherently consume electricity, the equipment that sends, receives, processes, and distributes these light signals. As a result, user devices can enjoy high-speed, latency-free Internet performance.
