

Function of 96-core optical cable splice closure

Overview

A 96 core dome splice closure is an essential passive component for modern fiber optic networks, providing a secure, weather-resistant, and highly adaptable enclosure for cable splicing, branching, and distribution. Engineered for outdoor, aerial, duct, and underground installations, this closure. In-line Horizontal Fiber Splice Joint Closure is used for direct connection and large capacity discontinuous connection of optical fiber cable, and plays a role of protecting optical fiber cable joint. It can meet the construction requirements for laying optical fiber cables, underground, pipelines. A 96 core fiber optic closure, commonly referred to as a fiber splice closure, plays a critical role in modern telecommunications infrastructure. Accommodates up to 4 splice trays with 4-in/4-out cable port configuration.
