

Function of Lightning Protection Module in Photovoltaic Combiner Box

Overview

Lightning protection: Lightning protection of photovoltaic combiner boxes is achieved through surge protection Module (SPD). The core logic is to discharge lightning energy quickly to prevent equipment from being damaged by overvoltage. Fuses provide overcurrent protection, disconnect switches. Modern solar power stations—from residential rooftops to 1500V industrial arrays—depend heavily on high-quality electrical enclosures, advanced protection components, and intelligent data systems to maintain long-term reliability. In a typical solar PV system, each string produces DC power. The combiner box collects those string outputs, provides protection and switching functions, and. One essential component that often goes unnoticed—but plays a critical role—is the Solar Photovoltaic Lightning Protection Grounding Box, also commonly referred to as a PV Combiner Box.
