

GPON Optical Module Level

Overview

Another key PON technology is GPON (Gigabit Passive Optical Network), which supports upstream rates of 1.5G, demonstrating excellent performance in terms of transmission rates and coverage. ITU-T standard for GPON modules defines class B+ and class. What is a GPON Optical Module?

A GPON optical module is a transceiver used in GPON networks to convert electrical signals into optical signals and vice versa. These modules are typically installed in Optical Line Terminals (OLTs) at the service provider's central office and Optical Network Units. Optical Distribution Network (ODN) - The physical fibre and optical devices that distribute signals to users in a telecommunications network. Otherwise, the optical module may be burnt. 1 Gbit/s and downlink service bandwidth is 2. Cisco ME Series products support any fiber-based (FTTx) access scenarios, including Fiber To The Home (FTTH), Fiber To The Building (FTTB), Fiber To The Curb (FTTC).
