

General Specifications of Optical Cable Sheathing

Article Overview

Optical cable sheaths are designed to protect fibers from environmental, mechanical, and chemical stresses, with materials and standards varying for indoor, outdoor, and specialized applications.

Sheath Materials and Types

Optical cable sheaths are typically made from polyethylene (PE), polyvinyl chloride (PVC), or low smoke zero halogen (LSZH) compounds depending on the installation environment . Outdoor cables often use UV-stabilized, weather-resistant PE to withstand sunlight, temperature fluctuations, and moisture . Indoor cables may use LSZH materials to reduce smoke and toxic gas emissions in case of fire, complying with fire safety standards such as IEC 60331 .

Mechanical and Environmental Protection

Sheaths provide mechanical reinforcement and environmental protection. Common features include:

- Steel wire braiding or aramid yarns for tensile strength and rodent protection .
- Water-blocking layers to prevent moisture ingress, especially in outdoor or underground installations .
- Mud-resistant or armored versions for harsh environments, including direct burial or aerial deployment
