

High-precision installation solution for corrugated ducts in El Salvador

Article Overview

HDPE corrugated ducts with specialized polymer compounds and pre-installed sub-duct systems offer high-precision, durable, and flexible installation solutions in El Salvador.

Material Selection

High-Density Polyethylene (HDPE) is the preferred material for corrugated ducts due to its flexibility, chemical resistance, and structural strength. HDPE pipes are suitable for both agricultural drainage and industrial applications, handling acidic or alkaline soils, heavy rainfall, and high groundwater conditions in El Salvador . Advanced polymer compounds, such as those from Elpolymer, provide exceptional environmental stress cracking resistance, impact resistance, and thermal stability, ensuring long-term reliability .

Installation Techniques

- **Pre-Perforated Pipes for Drainage:** For subsurface drainage, HDPE corrugated pipes with precise perforation patterns optimize water intake while preventing soil clogging, improving hydraulic performance and soil aeration .
- **Flexible Coils and Lightweight Design:** Corrugated coils allow rapid trench installation using standard machinery, minimizing labor and disruption to operations .
- **Pre-Installed Sub-Duct Systems:** For telecom or industrial cabling, systems like Almona PE-COD provide pre-installed sub-ducts, enabling fast, accurate, and organized cable deployment across diverse terrains
