

How long does it take to repair the external fiber optic cable when the router is showing a red light

Article Overview

Most external fiber optic cable repairs can be completed within 2 to 4 hours after technicians arrive on site, though complex cases may take several days.

Typical Repair Duration

Once a technician reaches the site, repairs on a standard fiber optic cable usually take between 2 to 4 hours for a complete restoration of service, depending on the number of fibers and the type of splicing equipment used . In simpler cases, minor cuts or visible damage may be fixed in under an hour, while more complex breaks, multiple fiber strands, or difficult access locations can extend the repair to up to six days .

Factors Affecting Repair Time

Several factors influence how long it takes to restore service:

- Complexity of the damage: Severed or frayed fibers require careful stripping, cleaving, and splicing .
- Number of fibers in the cable: Multi-fiber cables take longer to repair than single-fiber lines .
- Type of splicing: Fusion splicing is precise but takes longer than mechanical splici...
