

How to connect to the internet using a fiber optic cold connector

Article Overview

You can connect to the internet using a fiber optic cold connector by preparing the fiber, inserting it into the cold connector, securing the splice, and linking it to an ONT and router.

Step 1: Gather Necessary Tools and Equipment

Before starting, ensure you have the following:

- Fiber optic cold connectors (fast connectors)
- Fiber optic cable (single-mode or multi-mode)
- Fiber stripping tool and fiber cleaver
- Alcohol swabs and cleaning tools
- Optical Network Terminal (ONT) provided by your ISP
- Compatible router with a WAN or SFP port
- Ethernet cable to connect the ONT to the router
- Optional: Optical power meter or visual fault locator for testing

Step 2: Prepare the Fiber Cable

- Slide the connector boot onto the fiber cable.
- Strip the outer sheath of the fiber using a fiber stripper, exposing the bare fiber.
- Clean the bare fiber with alcohol swabs to remove any debris.
- Cleave the fiber using a fiber cleaver to create a smooth, even end for optimal splicing
