

# How to convert fiber optic cable to a 5-optical module

## Article Overview

To connect a fiber optic cable to a 5-optical module, use compatible SFP or MPO/MTP transceivers, ensure fiber type and connector match, and align TX/RX channels correctly.

### Step 1: Identify the Module Type

A "5-optical module" typically refers to a multi-channel optical transceiver, such as an MPO/MTP module with 5 channels or a 5-port SFP setup. Determine whether your module uses LC duplex connectors or MPO/MTP multi-fiber connectors, as this dictates the type of fiber patch cable required .

### Step 2: Match Fiber Type and Wavelength

Ensure the fiber optic cable matches the module specifications:

- Single-mode fiber (SMF) for long-distance links
- Multimode fiber (MMF) for short-distance links
- Verify the wavelength and transmission distance supported by the module .

### Step 3: Prepare the Fiber Cable

- Remove protective dust caps from both the fiber cable and the module ports.
- Clean the fiber connectors using a fiber cleaning kit to reduce insertion loss ....
