

How to install a fiber optic amplifier

Article Overview

To connect a fiber optic amplifier, mount it securely, insert the fiber cables into the correct ports, lock them in place, and configure the amplifier using its teaching or threshold settings.

Step 1: Mounting the Amplifier

- Most fiber optic amplifiers, such as the OCF or FX-505, are designed to be mounted on a DIN rail. Fit the rear part of the amplifier onto the rail, press down until it clicks, and then secure the front part to ensure stability .
- Ensure the amplifier is positioned in a location that avoids excessive vibration, heat, or moisture, which could affect performance .

Step 2: Selecting the Fiber

- Use the fiber optic selector tool or refer to the amplifier datasheet to choose compatible fibers based on sensing range, environmental conditions, and application type .
- For reflective or coaxial fiber types, ensure the beam-emitting fiber is connected to the designated “P” inlet and the beam-receiving fiber to the corresponding inlet .

Step 3: Inserting and Locking Fibers

- Before inserting fibers, attach any required connectors or fiber heads to the amplifier.
- Slowly insert the fiber cables into the amplifier ports until they stop....
