

How to install the panel box and fiber optic tray

Article Overview

Installing a fiber optic panel box involves securely mounting the enclosure, routing fiber cables carefully, and installing splice trays to manage and protect fiber connections.

Step 1: Mount the Fiber Optic Panel Box

- Determine the installation location on a rack or wall, ensuring easy access for maintenance and cable routing ().
- Attach mounting brackets to the sides of the panel box if required.
- Secure the box using screws or anchors appropriate for the surface (rack, drywall, or concrete) while ensuring the box is level ().
- Confirm the orientation of the box so that front panels and drawers can be fully extended without tension on the cables ().

Step 2: Introduce Fiber Optic Cables

- Feed the fiber optic cable through the cable entry port or grommet, leaving a service loop of 10–15 cm inside the box ().
- Use cable clips or ties to secure the main trunk cable without bending it beyond the minimum bend radius (typically 30 mm) ().
- For pre-terminated fibers, ensure the connectors are protected during routing to prevent damage ().

Step 3: Install the Fiber Optic Patch Panel

- Pull out the drawer of the enclosure if it is a sliding type ()....
