

How to manage the wires inside the distribution box

Article Overview

Proper wire management in a distribution box ensures safety, prevents short circuits, and allows easy maintenance.

Safety First

Before handling any wires, turn off the main power supply and verify with a tester that no electricity is present in the distribution box . Wear insulating gloves, safety glasses, and non-slip shoes to prevent electric shock . Ensure the workspace is dry and well-lit.

Organizing Wires

- Strip and prepare wires carefully, removing insulation only where connections are needed .
- Separate wires by type: live (phase), neutral, and ground. Use color-coded wires to avoid confusion.
- Route wires neatly along the edges or designated channels inside the box to prevent tangling and allow airflow .
- Use cable ties or clips to bundle wires together without over-tightening, which can damage insulation .
