

How to use the Peruvian micro-module

Article Overview

The Peruvian micro-module can be used by properly installing it in a suitable location, connecting power and equipment according to specifications, and following safety and operational guidelines.

Placement and Setup

The Peruvian micro-module is designed for compact deployment and does not require a dedicated machine room. It can be placed in offices, conference rooms, warehouses, or production workshops. Ensure the module is on a stable surface and has adequate ventilation to maintain cooling efficiency, as most micro-modules support up to 3.5 kW of cooling capacity .

Power and Electrical Connections

- The module typically requires 220V AC, 50/60 Hz, single-phase with neutral and protective earth .
- Before connecting any equipment, turn off the main power switch to prevent electrical hazards .
- For electrical micro-modules like the Marmitek TMD4, connect the blue wire (common) to the neutral terminal and ensure all wiring follows the local electrical code .

Installing Equipment

- Place heavier components, such as storage controllers, in the middle of the cabin...
