

India exports 400G of cybersecurity equipment

Article Overview

India is emerging as a significant player in cybersecurity solutions, with growing domestic demand and increasing potential for high-speed equipment exports, including advanced 400G solutions.

Cybersecurity Market Growth in India

India's cybersecurity market is rapidly expanding, estimated at USD 4.7 billion in 2024 and projected to reach USD 10.9–12.9 billion by 2029–2030, reflecting a CAGR of over 18% . This growth is driven by increased digitalization, cloud adoption, hybrid work models, and the proliferation of Internet of Things (IoT) devices, which expand the attack surface and necessitate advanced security solutions . Key sectors investing heavily include banking, telecommunications, e-commerce, healthcare, IT/ITES, and government agencies .

Demand for Advanced Equipment

High-speed cybersecurity equipment, such as 400G network security devices, is increasingly critical for protecting large-scale enterprise networks, cloud infrastructure, and telecom backbones. India's focus on threat intelligence, cloud security, data protection, and incident response has created strong demand for such advanced solutions . The government's regulatory frameworks, including the Digital Personal Data Protection Act (DPDPA) 2023, further incentivize organizations to adopt robust cybersecurity hardware and software .
