

Indoor wall-mounted distribution box specifications

Article Overview

Indoor wall-mounted distribution boxes are designed for secure, organized, and accessible electrical or fiber-optic connections, featuring durable enclosures, cable entry knockouts, and optional locking mechanisms.

General Features

Indoor wall-mounted distribution boxes are typically designed for residential, commercial, or light industrial use. They provide a safe enclosure for electrical circuits or fiber-optic connections while allowing easy access for maintenance and inspection. Common features include:

- **Enclosure Material:** Durable plastic (polystyrene) or lightweight steel, often self-extinguishing, corrosion-resistant, and impact-resistant for long-term indoor use .
- **Cover:** Transparent or lockable covers for visual inspection without opening the box, sometimes with removable doors that can hinge left or right depending on installation needs .
- **Mounting:** Wall-mounted, either surface-mounted or flush-mounted, with pre-drilled holes or plastic corner pieces for secure attachment .
- **Cable Entry:** Knockouts or molded cable entry points at the top and bottom, often with integrated wire guides and fixing rings for organized cable management .
- **Protection Rating:** Typically IP20 for indoor use, providing protection against solid objects but not water ingress
