

Installation dimensions of distribution box column

Article Overview

Distribution box columns are typically installed at a height of around 1.5 meters with standard widths and depths varying by type, ensuring safe access, ventilation, and compliance with electrical codes.

Installation Height and Placement

For both residential and industrial setups, distribution boxes are generally installed at a height of approximately 1.5 meters from the floor to the center of the box, allowing easy access for operation and maintenance while maintaining safety standards . Boxes should be placed in dry, ventilated, and accessible areas, avoiding locations prone to water exposure or obstruction .

Standard Dimensions

Distribution box dimensions vary depending on the type and number of ways (circuits) they accommodate:

- Residential Main Panels (200A, 40–42 slots): Typical width 400–450 mm, height 600–800 mm, depth 150–200 mm .
- Industrial Wall-Mounted Boxes: Width 500–800 mm, height 800–1200 mm, depth 200–300 mm, often with high IP ratings (IP44–IP67) for weatherproofing .
- Specialty Retrofit or Junction Boxes: Smaller boxes for 1–12 ways, width 150–300 mm, height 200–400 mm, depth 100–150 mm
