

Installation of 96-core optical distribution box

Article Overview

A 96-core optical distribution box can be installed by securely mounting it, introducing and fixing fiber cables, and carefully routing fibers to ensure protection and manageability.

Step 1: Mounting the Distribution Box

For wall-mounted boxes, select a suitable location with enough space for access and maintenance. Use the provided brackets or mounting holes to fix the box securely to the wall, ensuring it is level and stable. For rack-mounted ODF units, attach the brackets to the sides of the box and secure them to the designated rack position with screws, following the 19-inch rack standard if applicable .

Step 2: Introducing Fiber Cables

Introduce the optical cables through the designated cable inlet holes. Use grommets or cable glands to protect the fibers from sharp edges and to secure the cables in place. Pre-terminated branch fiber jumpers or pigtails are commonly used. Ensure the cable length inside the box allows the front panel or drawer to be fully extended without tension on the fibers .

Step 3: Routing and Managing Fibers

- Drawer or tray structure: Pull-out trays or drawers facilitate high-density wiring an...
