

List of Primary Distribution Boxes

Article Overview

Primary distribution boxes are electrical enclosures that distribute incoming power from substations to multiple circuits, typically including feeders, transformers, protective devices, and busbars.

Overview of Primary Distribution Boxes

Primary distribution boxes, also known as distribution boards (DB boxes) or power distribution units (PDUs), serve as the central hub for electrical power distribution in residential, commercial, and industrial systems. They receive incoming power from a distribution substation and safely route it to multiple outgoing circuits while providing overcurrent protection and isolation points for maintenance ().

Types of Primary Distribution Boxes

- Standard DB Boxes
 - Enclosures housing circuit breakers, fuses, busbars, neutral links, and grounding bars.
 - Can be single-phase or three-phase, AC or DC.
 - Used in homes, offices, and small industrial setups ().
- Fuse Boxes
 - Older type of distribution panel using fuses instead of circuit breakers.
 - Protects circuits by blowing when current exceeds limits.
 - Less common in modern installations ().
- Smart Distribution Boxes...
