

Metal fittings for fiber optic cable junction boxes

Article Overview

Metal junction boxes and splicing enclosures provide secure, durable, and weather-resistant protection for fiber optic cable splices in outdoor and high-voltage environments.

Overview

Metal junction boxes, also known as fiber splice closures, are designed to house and protect fiber optic splices while maintaining the minimum bending radius of fibers. They are commonly used with OPGW, ADSS, and OPPC cables in power transmission, telecom, and industrial networks . These boxes ensure long-term reliability, prevent signal loss, and protect fibers from environmental hazards such as moisture, dust, UV radiation, and extreme temperatures .

Materials and Construction

- **Aluminum Alloy:** Most metal junction boxes are made from high-strength aluminum alloy, providing corrosion resistance, mechanical strength, and lightweight durability .
- **Stainless Steel Components:** Used for internal parts, mounting brackets, and fasteners to enhance structural integrity and longevity .
- **IP Ratings:** Commonly rated IP65 or IP67, ensuring protection against water ingress, dust, and environmental stress .
- **Internal Components:** Include splice trays, fiber storage baskets, protection tubes, and cable strength member attachment plates for organized fiber management
