

Micro-module installation price

Article Overview

The total cost for installing microinverters typically ranges from \$1,500 to \$3,000 for a 5 kW residential system, with unit prices between \$100 and \$250 each, plus additional installation and balance-of-system costs.

Hardware Costs

Microinverters are installed on each solar panel to convert DC to AC electricity individually. Unit prices range from \$100 to \$250 per microinverter, depending on brand, model, and power rating . For example, a 5 kW system using 8 panels with 400W each would require 8 microinverters, costing \$800 to \$2,000 for the hardware alone . Premium brands like Enphase IQ series offer higher efficiency and longer warranties, while budget alternatives like Hoymiles or APsystems can reduce upfront costs by 20–40% .

Installation Costs

Installing microinverters is more labor-intensive than string inverters because each panel requires individual attachment, wiring, and configuration. Labor costs typically add \$500 to \$1,500 for a 5 kW system . Additional components such as AC wiring, mounting systems, DC fuses, breakers, and rapid shutdown devices can add \$1,000 to \$2,000 to the total cost . Overall, installation costs for a 5 kW system can range from \$5,000 to \$15,000, depending on roof complexity, installer expertise, and local labor rates .
