

Moroccan Fiber Optic Wavelength Division Multiplexer

Overview

Wavelength division multiplexer for 1300 & 1550nm with 1 meter long, 3mm OD jacketed 7/125 PM fiber pigtails, 60dB return loss and ultra FC/PC connectors. In fiber-optic communications, wavelength-division multiplexing (WDM) is a technology which multiplexes a number of optical carrier signals onto a single optical fiber by using different wavelengths (i. This technique enables bidirectional communications over a. With the software RP Fiber Power one can simulate how channel powers evolve in a system, how cross-talk arises from nonlinear interactions, etc. Selection criteria, tradeoffs, and 73 suppliers – including: Find more supplier details at the end of the Encyclopedia article. The light from each fiber is first collimated. This allows multiple channels of data to be transmitted simultaneously. SONET time-division multiplexing.
