

Nanya Fiber Optic Cable Tray 1200mm Depth

Article Overview

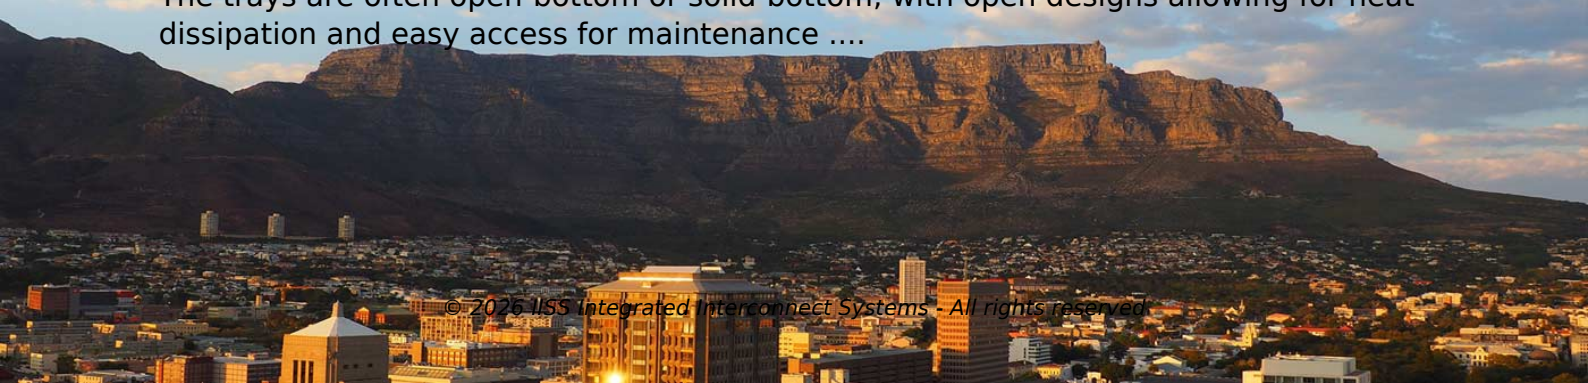

A 1200mm deep Nanya fiber optic cable tray is designed to support and organize high-density fiber optic cabling in data centers, enterprise networks, and industrial installations.

Overview

Fiber optic cable trays, such as those offered by Nanya, are raceway systems that provide structured support, protection, and routing for fiber optic and high-performance copper cables. A tray with a 1200mm depth is considered a large-capacity tray, suitable for installations requiring significant cable volume or high-density network environments. These trays are typically used in data centers, central offices, and mobile switching centers to manage cables between network cabinets, distribution frames, and terminal devices.

Material and Construction

Fiber optic cable trays are commonly made from metallic materials like aluminum or steel for strength and electromagnetic shielding, or non-metallic materials such as fiberglass-reinforced plastic (FRP) for corrosion resistance and lightweight applications. FRP trays are particularly suitable for chemical or wet environments. The trays are often open-bottom or solid-bottom, with open designs allowing for heat dissipation and easy access for maintenance
