

# North Korean optical cable splice box manufacturer

## Article Overview

Currently, there is no publicly available information on North Korean manufacturers of optical cable splice boxes. North Korea's telecommunications and industrial sectors are highly restricted and largely closed to international markets, making it difficult to identify domestic suppliers of specialized fiber optic equipment. Most known manufacturers of fiber optic splice closures are based in South Korea, such as Korea Optron Corp., X-BEAM TECH, and SUNIL Telecom, which produce closures for long-distance transmission, FTTH networks, and harsh environments . Fiber optic splice closures are used to protect junction points of optical cables, provide environmental sealing, and allow branching or splitting of fibers in networks. They are typically made from UV-stabilized, impact-resistant materials and can operate in extreme temperatures ranging from  $-40^{\circ}\text{C}$  to  $+65^{\circ}\text{C}$  . Closures often feature multiple cable entry ports, silicone gaskets for sealing, and compact designs for easy installation . For research or procurement purposes, organizations outside North Korea generally rely on South Korean or international suppliers for fiber optic splice closures, as North Korean production is not documented or accessible. If the goal is to study North Korean telecommunications infrastructure, it may be more practical to focus on network deployment patterns and imported equipment rather than domestic manufacturing.
