

Price of 96-core optical fiber splicing

Article Overview

The total cost for splicing a 96-core fiber optic cable typically ranges from \$2,500 to \$8,000, depending on splicing method, labor, and equipment.

Cost Breakdown

Per-Splice Cost: Fusion splicing, the most common method for permanent installations, generally costs \$50–\$150 per splice depending on project size, site conditions, and contractor rates. Mechanical splicing is cheaper upfront but less reliable for long-term use. **Total Splices for 96-Core Cable:** A 96-core cable requires 96 individual splices if each fiber is joined separately. Using the per-splice range:

- Low estimate: $96 \times \$50 = \$4,800$
 - High estimate: $96 \times \$150 = \$14,400$ Volume pricing may reduce this cost, especially for large projects, potentially lowering the per-splice rate to around \$25–\$60 per splice.
- Equipment Costs:** Fusion splicers cost \$3,000–\$15,000, and precision cleavers range from \$500–\$2,000. These are typically one-time capital expenses if the contractor owns the equipment.
- Splice Closure Cost:** A 96-core fiber optic splice closure, which houses and protects all splices, typically costs \$100–\$500 depending on brand and features.

Additional Considerations

- **Site Conditions:** Underground vaults, aerial installations, or confined spaces can increase labor costs.
- **Testing and Verification:** OTDR testing is usually included in the per-splice cost bu...
