

Process Flow of Explosion-proof Power Distribution Box

Overview

Process Flow for High and Low Voltage Explosion-Proof Distribution Boxes: Foundation acceptance. Unboxing and equipment inspection. The main switch and sub switch operation panels can be distinguished according to color. The material can be customized according to user requirements. This is why the Explosion-proof terminal box plays a central role in chemical plants, refineries, oil exploitation sites, offshore platforms, oil tankers, military facilities, and other locations classified as dangerous areas. Rather than treating this enclosure as a simple accessory, engineers. Flameproof enclosure (Ex db), which can be used as feed distribution equipment in control and distribution system (such as distribution box, switch box of main circuit, control box, terminal box or motor starting box etc.) Enclosure: 304 stainless steel, 316L stainless steel and Q235.
