

Professional Optical Cable Opening Tools

Article Overview

Professional optical cable opening tools are specialized devices designed to safely and efficiently strip, cut, and access fiber optic cables for installation, splicing, and maintenance.

Key Types of Optical Cable Opening Tools

1. Longitudinal Cable Openers These tools allow technicians to make precise longitudinal cuts along the cable jacket without damaging internal fibers. For example, the Haile Longitudinal Cable Opener KL-02 provides ergonomic handling and sharp blades for clean cuts, making it ideal for preparing cables before splicing or connectorization in telecom and data networks . 2. Mid-Span Slit & Ring Tools Mid-span tools, such as the Jonard MS-446, are designed to access interior fibers in thick-walled cables (8.7-14.6 mm diameter). They are particularly useful for heavy-duty outdoor cables and allow quick, safe access to fibers without cutting the entire cable . 3. Fiber Strippers and Thermal Strippers Fiber strippers remove protective coatings from optical fibers. Jonard Tools offers adjustable thermal strippers like the TSAB-40, capable of stripping baked-on coatings and fluoroacrylate undercoating for fibers with cladding diameters from 30 μm to 1000 μm . These tools are essential for delicate fiber preparation. 4. Cable Cutters and Cleavers Professional cleavers and cutters ensure precise fiber end preparation for splicing. Tools like the FC-220 Fiber Cleaver provide accurate, repeatable cuts, which are critical for minimizing signal loss during splicing . 5. Complete Tool Kits and Accessories Many manufacturers, including Corning and Foss, offer comprehensive fiber optic tool kits that include access tools, polishing films, cleaning accessories, and replacement parts. These kits are designed to equip technicians for full installation and maintenance tasks ...
