

Relay protection verification telemetry

Overview

A comprehensive testing program should simulate fault and normal operating conditions of the relay. Megger's smart relay testing solutions and expert support help you validate protection performance, improve system reliability, and ensure continuity of power across your network. Ensure protection systems operate correctly. Doble RTS™ (RTS) is the premier protection testing software system for improving the work of testing relays and managing test records. Process consistency with power and flexibility set RTS software apart, and tremendous automation enables unmatched efficiency, accuracy and productivity. This responsibility includes creating a compliance program to improve. This document details the requirements for performing end to end testing of each participating PJM Company when commissioning, modifying or troubleshooting interconnected line protection schemes. This is why protection relays must undergo thorough tests throughout their entire lifecycle – from development and manufacturing to commissioning and regular maintenance.
