

Southern European Spectrometer

Overview

It is a panoramic integral-field spectrograph operating in the visible wavelength range. It combines a wide field of view with the improved spatial resolution provided by adaptive optics and covers a large simultaneous spectral range. For the first time, astronomers unveiled the shape of the explosion at its earliest, fleeting stage. The Multi Unit Spectroscopic Explorer (MUSE) is a second generation instrument in development for the Very Large Telescope (VLT) of the European Southern Observatory (ESO). Among its goals is radial velocity measurements to study binary stars and. European Spectrometry Services are world leaders in mass spectrometry systems. We cater to any customer, creating bespoke instruments perfect for your needs and requirements, from multiple sample points to portable instruments. On-site or in-house maintenance and repairs can be provided on all.
