

Standard Size and Specifications of Hydropower Distribution Boxes

Article Overview

Hydropower distribution boxes are typically fabricated from 2 mm GI sheet steel, designed for outdoor use, with IP-55 protection, reinforced structure, and busbar arrangements sized according to transformer capacity.

Material and Construction

Hydropower distribution boxes are generally outdoor-rated and fabricated from 2 mm galvanized iron (GI) sheet steel for durability and corrosion resistance. The body is reinforced with suitable channels, and the roof is slightly slanted with a 50 mm overhang to prevent water ingress. Doors are equipped with concealed hinges and Godrej-type 3-position locking systems, with additional galvanized manual locking provisions to avoid rusting. Solid earthing points are provided on either side of the box to ensure safety and compliance with electrical standards .

Protection and Standards

The boxes are designed to meet IP-55 degree of protection, ensuring resistance to dust and water jets. Type test certificates from approved laboratories (e.g., CPRI) are required to validate compliance. Insulators, busbars, and other components must conform to IEC or IS standards applicable for low-tension (LT) supply .
