

The bandwidth of the ECPRI optical module is

Overview

Single Fiber 25G Fronthaul SFP28 Module (Tx/Rx 1270/1330nm, 8. -45 to 85C, LC Connector) 1270 nm. This article examines their architectural differences, performance implications (bandwidth, latency, transport), functional-split considerations, and why eCPRI is increasingly adopted in 5G RAN deployments. What is CPRI?

CPRI (Common Public Radio Interface) defines a specification for transporting. These changes impose new demands on optical modules to meet the high bandwidth and distance requirements associated with key links in the 5G network architecture. Furthermore, the refer other ipment (see Figure 1). BIDI-25GFH-SFP28-20AI is an Industrial Temperature Tx:1270nm Rx:1330nm BIDI 25GE LR 20km eCPRI (enhanced CPRI) / CPRI Fronthaul Multi-Vendor. eREC and eRE).) between eCPRI nodes in real-time for control/configuratio eCPRI node. any “side” of the interface. Now the BBU and RRU can be separated by up to 20 km of high-performance, high-throughput fiber-optic cabling.
