

Thickened Waterproof Distribution Box

Article Overview

Waterproof and thickened distribution boxes provide durable, IP65–IP68 rated protection for electrical components in harsh outdoor and industrial environments.

Key Features

Waterproofing and IP Ratings: These distribution boxes are designed to protect electrical terminals, splices, and modules from water, dust, and UV exposure. Standard ratings include IP65 (protection against low-pressure water jets and dust) and IP66–IP68 (protection against powerful water jets and temporary submersion) for outdoor reliability and safety . **Material and Durability:** Common materials include UV-stabilized polycarbonate (PC) and flame-retardant ABS, offering excellent mechanical strength and weather resistance. Polycarbonate is ideal for outdoor, solar, and marine applications, while ABS is cost-effective for indoor or shaded installations . Thickened walls enhance structural integrity, making the enclosure resistant to impact, corrosion, and environmental stress. **Design and Configuration:** Distribution boxes come in single, double, or triple layers, with modular configurations ranging from 4-way to 36-way layouts. Many models include pre-installed 35 mm DIN rails, copper terminals, and busbars for easy installation of MCBs, PV combiner wiring, or sub-feed distribution . **Customization Options:** Manufacturers offer custom dimensions, wall thickness, internal module capacity, and knockout hole positions to match specific project requirements. Color matching (RAL standards) and pre-drilled gland plates are available for branding or site-specific layouts . **Applications:** These boxes are suitable for industrial, commercial, photovoltaic, solar PV, outdoor lighting, irrigation, and marine environments. They ensure long-term performance under exposure to sun, rain, dust, and occasional pressure cleaning . **Standards Complan...**
