

What kind of router should I use for fiber optic internet

Article Overview

For fiber optic internet, choose a router that supports Wi-Fi 6 or Wi-Fi 7, has gigabit or multi-gig Ethernet ports, and offers strong coverage and security features.

Key Features to Look For

Wi-Fi Standard: Modern fiber connections benefit from Wi-Fi 6 (802.11ax) or Wi-Fi 7 routers, which provide faster speeds, lower latency, and better performance in crowded networks . Wi-Fi 7 is ideal for multi-gigabit fiber plans and future-proofing your network . **Ethernet Ports:** Look for routers with gigabit or multi-gigabit LAN and WAN ports. Some high-end models support LAN aggregation, allowing combined ports to achieve speeds up to 2 Gbps . **Coverage and Antennas:** Choose a router with sufficient range for your home or office. High-end routers like the Netgear Nighthawk RS700S cover up to 3,500 sq. ft. with multiple internal antennas . Mesh systems, such as Linksys Velop AX4200, are ideal for eliminating dead zones in larger homes . **Device Capacity:** Fiber connections often support many devices simultaneously. Premium routers can handle 100–200 devices without performance drops . **Security and Features:** Advanced routers include built-in security suites, parental controls, and features like Wi-Fi Protected Setup (WPS) for easy device connection . Some models, like the ASUS RT-AX86U Pro, offer AiProtection for malware and hacker protection without subscription fees .
