

What type of waste does fiber optic cable belong to

Overview

Despite their advantages, fiber optic cables still contribute to electronic waste (e-waste) when they are decommissioned. Spools and reels are where volume sneaks up on people. That cable contains silicon dioxide – basically purified sand – which can live virtually forever if we give it a second chance. Unlike copper wiring that needs constant replacement, fiber optics are marathon runners of infrastructure. Fiber optics require less maintenance and offer high-speed data transfer, providing. RECYFIBRE is at the heart of the green revolution in the telecommunications industry, dedicated to the sustainable management of optical fiber scraps. While many telecommunications companies continue to produce optical waste during the installation and deployment of their networks, these scraps are. We are one of the only companies that not only recycles your fiber packaging, but also the fiber optic product itself. No matter what type of product reels or housing your fiber product might housed in, we have the ability to clean, sanitize and refurbish it. Our unique process is able to make your.
